

If you did put a valid address, the finder will ask you a login and password, and then mount the shared folder as a volume on your Mac (you can take a look at the screen shot ;-)).

4) Sharity
URL : <http://www.obdev.at/products/sharity/index.html>
latest version : 2.6n yo

1) First big problem : Sharity is only a client, it will NOT allow you to share files with other computers. So if you want to share files,

Note that all the binaries have been installed in `/usr/local/bin` but I think it would be cleaner to install the servers in one of the `/usr/sbin` or `/sbin/` or `/usr/local/sbin...` You can change that while 5mm20finI ther

fig4 : setting up your identity for smb is that easy !

fig5 : notice the cool feature which allows you to chose your connection ports
